## SECTION 7. Handling and storage

7.1. Precautions for safe handling	
Safe use of the product	<ul> <li>Do not breathe gas. Avoid release of product into atmosphere. Use no oil or grease. Use only properly specified equipment which is suitable for this product, its supply pressure and temperature. Contact your gas supplier if in doubt. Do not smoke while handling product. Keep equipment free from oil and grease. Use only oxygen approved lubricants and oxygen approved sealings. Only experienced and properly instructed persons should handle gases under pressure. Ensure the complete gas system was (or is regularily) checked for leaks before use. Use only with equipment cleaned for oxygen service and rated for cylinder pressure. The product must be handled in accordance with good industrial hygiene and safety procedures. Consider pressure relief device(s) in gas installations.</li> </ul>
Safe handling of the gas receptacle	<ul> <li>Suck back of water into the container must be prevented.</li> <li>Open valve slowly to avoid pressure shock.</li> <li>Refer to supplier's container handling instructions.</li> <li>Do not allow backfeed into the container.</li> <li>Replace valve outlet caps or plugs and container caps where supplied as soon as container is disconnected from equipment.</li> <li>Protect cylinders from physical damage; do not drag, roll, slide or drop.</li> <li>Do not remove or deface labels provided by the supplier for the identification of the cylinder contents.</li> <li>When moving cylinders, even for short distances, use a cart (trolley, hand truck, etc.) designed to transport cylinders.</li> <li>Leave valve protection caps in place until the container has been secured against either a wall or bench or placed in a container stand and is ready for use.</li> <li>If user experiences any difficulty operating cylinder valve discontinue use and contact supplier.</li> <li>Close container valve after each use and when empty, even if still connected to equipment.</li> <li>Never attempt to repair or modify container valves or safety relief devices.</li> <li>Keep container valve outlets clean and free from contaminants particularly oil and water.</li> <li>Never use direct flame or electrical heating devices to raise the pressure of a container.</li> <li>Damaged valves should be reported immediately to the supplier.</li> </ul>
7.2. Conditions for safe storage, incl	uding any incompatibilities
	: Keep container below 50°C in a well ventilated place. Segregate from flammable gases and other flammable materials in store. Store containers in location free from fire risk and away from sources of heat and ignition. Stored containers should be periodically checked for general condition and leakage.

Containers should not be stored in conditions likely to encourage corrosion. Containers should be stored in the vertical position and properly secured to prevent toppling. Container valve guards or caps should be in place. Keep away from combustible materials.
