

Schriftenverzeichnis Frank Natterer

28. November 2016

Books:

Natterer, F.: The Mathematics of Computerized Tomography. Teubner-Wiley 1986. Russische Ausgabe MIR, Moskau 1990. Reprinted in SIAM Classics in Applied Mathematics.

Natterer, F. and Wübbeling, F.: Mathematical Methods in Image Reconstruction. SIAM 2001.

Books edited:

Börger, C. and Natterer, F.: Computational Radiology and Imaging. *Therapy and Diagnostics. The IMA volumes in mathematics and its applications*, vol. **110**, Springer 1998.

Herman, G.T. and Natterer, F.: Mathematical Aspects of Computerized Tomography. *Lecture Notes in Medical Informatics*, vol. **8**, Springer 1981.

Herman, G.T., Louis, A.K. and Natterer, F.: Mathematical Methods in Tomography. *Lecture Notes in Mathematics*, vol. **1497**, Springer 1991.

Articles

1. Einschließungen für die großen Eigenwerte bei gewöhnlichen Differentialgleichungen zweiter und vierter Ordnung. *Numer. Math.* **13**, 78-93 (1969).
2. Numerische Behandlung singulärer Sturm-Liouville-Probleme. *Numer. Math.* **13**, 434-447 (1969).
3. Einschließungen für die großen Eigenwerte gewöhnlicher Differentialgleichungen, *ZAMM* **50**, T86 (1970)

4. Numerical methods of high-order accuracy for singular nonlinear boundary value problems. (Zusammen mit P.G. Ciarlet und R.S. Varga). *Numer. Math.* **15**, 87-99 (1970).
5. Schranken für die Eigenwerte gewöhnlicher Differentialgleichungen durch Spline- Approximation. *Numer. Math.* **14**, 346-354 (1970).
6. Berechnung der Norm der Inversen eines Differentialoperators zweiter Ordnung. *Computing* **5**, 214-220 (1970).
7. Obere Schranken für die Norm Green'scher Funktionen, *ZAMM* **51** T67 - T68 (1971)
8. Schranken für die Norm der Greenschen Funktion gewöhnlicher Differentialoperatoren. *Numer. Math.* **17**, 402-408 (1971).
9. A generalized spline method for singular boundary value problems of ordinary differential equations. *Lin. Alg. Appl.* **7**, 189-216 (1973).
10. Eine Erweiterung des Maximumprinzips für den Laplaceschen Operator. (Zusammen mit B. Werner). *Numer. Math.* **22**, 149-156 (1974).
11. Berechenbare Fehlerschranken für die Methode der Finiten Elemente. *ISNM* **28**, 109-128 (1975).
12. Das Randwertproblem für eine Klasse singulärer gewöhnlicher Differentialausdrücke. *Aequationes Mathematicae* **12**, 207-228 (1975).
13. Das Differenzenverfahren für singuläre Rand-Eigenwertaufgaben gewöhnlicher Differentialgleichungen. *Numer. Math.* **23**, 387-409 (1975).
14. Über die punktweise Konvergenz Finiten Elemente. *Numer. Math.* **25**, 67-77 (1975).
15. Optimale L_2 -Konvergenz Finiten Elemente bei Variationsungleichungen. *Bonner Mathematische Schriften* **89**, 1-11 (1976).
16. Uniform convergence of Galerkin's method for splines on highly non-uniform meshes. *Math. Comp.* **31**, 457-468 (1977).
17. The finite element method for ill-posed problems. *RAIRO Analyse numerique* **11**, 271-278 (1977).
18. Regularisierung schlecht gestellter Probleme durch Projektionsverfahren. *Numer. Math.* **28**, 329-341 (1977).
19. Numerical inversion of the Radon transform. *Numer. Math.* **30**, 81-91 (1978).
20. Berechnung oberer Schranken für die Norm der Ritz-Projektion auf Finite Elemente. *ISNM* **39**, 236-245 (1978).

21. Genauigkeitsfragen bei der numerischen Rekonstruktion von Bildern, in *Ansorge, R. (ed.): Vorträge auf der Tagung über Numerische Mathematik aus Anlaß der Emeritierung von L. Collatz*, ISNM Birkhäuser Verlag, Januar 1979.
22. The ill-posedness of Radon's integral equation. *Proc. of the Symposion on ill-posed problems: Theory and Practice*, Delaware, USA, October 2-6 (1979).
23. On the inversion of the attenuated Radon transform. *Numer. Math.* **32**, 431-438 (1979).
24. A Sobolev space analysis of picture reconstruction. *SIAM J. Appl. Math.* **39**, 402-411 (1980).
25. Efficient implementation of "optimal" algorithms in computerized tomography. *Math. Meth. Appl. Sci.* **2**, 545-555 (1980).
26. The identification problem in emission computed tomography. *In: Herman, G.T. - Natterer, F. (eds.): Mathematical Aspects of Computerized Tomography*. Springer 1981.
27. Exploiting the ranges of Radon transforms in computerized tomography. *In: Deuffhard, P. - Hairer, E. (eds.): Numerical Treatment of Inverse Problems in Differential and Integral Equations*. Birkhäuser 1983.
28. On the order of regularization methods. *ISNM* **63**, 189-203 (1983).
29. Computerized tomography with unknown sources. *SIAM J. Appl. Math.* **43**, 1201-1212 (1983).
30. Mathematical problems of computerized tomography. (Invited paper, zusammen mit A. Louis). *Proceedings of the IEEE* **71**, 379-389 (1983).
31. Error bounds for Tikhonov regularization in Hilbert scales. *Appl. Anal.* **18**, 29-37 (1984).
32. Einige Beiträge der Mathematik zur Computer-Tomographie. *ZAMM* **64**, T252-T260 (1984).
33. Some non-standard Radon problems. *In: Boffi, V. - Neunzert, H. (eds.): Applications of Mathematics in Technology*. Teubner 1984.
34. Numerik des Radonschen Problems. *Jber. d. Dt. Math. Verein.* **87**, 108-126 (1985).
35. Fourier reconstruction in tomography. *Numer. Math.*, **47**, 343-353 (1985).
36. Efficient evaluation of oversampled functions. *J. Computational and Applied Mathematics* **14**, 303-309 (1986).

37. Numerical treatment of ill-posed problems. *In: Talenti, G. (ed.): Inverse problems*, p. 142-167. Springer 1986.
38. Severely ill-posed Radon problems. *In: Engl, H.W. - Groetsch, C.W. (eds.): Inverse and ill-posed problems*, p. 247-259. Academic Press 1987.
39. Attenuation correction in emission tomography. *In: Sabatier, P. (ed.): Inverse Problems*, p. 21-33. Academic Press 1987.
40. Regularization techniques in medical imaging. *In: Viergever, M.A. - Todd-Pokropek, A. (eds.): Mathematics and Computer Science in Medical Imaging*, p. 127-142. NATO ASI series 1987.
41. The attenuated Radon transform. *In: Viergever, M.A. - Todd-Pokropek, A. (eds.): Mathematics and Computer Science in Medical Imaging*, p. 271-278. NATO ASI series 1987.
42. Resolution in computerized tomography. *In: Meyer-Ebrecht, D. (Hrsg.): ASST 87*, p. 29-36. Springer 1987.
43. Mathematics and tomography. *In: McKenna, J. - Temam, R. (eds.): Proceedings of the first international conference on industrial and applied mathematics, SIAM, Philadelphia 1988*, p. 183-199.
44. Mathematische Methoden in der Tomographie, in: *Proceedings der 9. TMP, Karl-Marx-Stadt 1988, Teubner-Texte zur Mathematik, Bd. 111, Leipzig 1989*
45. An inverse problem for the transport equation and integral geometry. *Proceedings of the AMS conference on Integral Geometry, Arcata 1989, Contemporary Mathematics, AMS 1990.*
46. Discrete inverse evolution problems. *In: Sabatier, P. (ed.): Inverse Problems in Action*, p. 29-37. Springer 1990.
47. Basic algorithms in tomography. (Zusammen mit A. Faridani), *in: Grünbaum, F.A. - Helton, J.W. - Khargonekar, P. (eds.): Signal Processing PART II: Control Theory and Applications*, p. 321-334, Springer 1990.
48. A tutorial in tomography. *Proceedings of the conference on "Problèmes Inverses"*, Rocquencourt 1990. INRIA, Domaine de Voluceau BP 105, F-78153 Le Chesnay Cedex.
49. Local and global tomography. (Zusammen mit A. Faridani, F. Keinert, E.L. Ritman, K.T. Smith), *in: Grünbaum, F.A. Helton, J.W. - Khargonekar, P. (eds.): Signal Processing PART II: Control Theory and Applications*, p. 241-256, Springer 1990.

50. Mathematische Methoden der Computer–Tomographie. *Rheinisch- Westfälische Akademie der Wissenschaften*, Vorträge **N375**, S. 7-25. Westdeutscher Verlag 1990.
51. 2D sampling in tomography. In: Laurent, P.J. - Le Méhauté, A. - Schumaker, L.L. (eds.): *Curves and Surfaces*, Academic Press 1991.
52. Tomography with unknown directions. *Proceedings of the Oberwolfach Conference on “Mathematical Methods in Tomography”, 1990*. Springer 1991.
53. Attenuation correction in PET. (Zusammen mit H. Herzog, KfA Jülich), *Mathematical Methods in the Applied Sciences* **15**, p. 321-330 (1992).
54. A Lanczos type method for inverse Sturm-Liouville problems. *Proceedings of the Centre for Mathematics and its Applications, Australien National University*, **31**, 82-88, (1992).
55. A finite difference method for the inverse scattering problem at fixed frequency (with F. Wübbeling). Proceedings of the Lapland conference on Inverse Problems, June 1992.
56. Efficient scanning in fan beam tomography. *SPIE* **1767**, 320-325 (1992).
57. Sampling in fan beam tomography, *SIAM J. Appl. Math.*, **53**, 358-380 (1993).
58. Determination of tissue attenuation in emission tomography of optically dense media, *Inverse Problems* **9**, p. 731-736 (1993).
59. Tomography with few data, in: Anger et al. (eds.): *Inverse Problems: Principle and Applications in Geophysics, Technology, and Medicine*. Akademie-Verlag 1993.
60. Recent developments in x-ray tomography, *in: Quinto, E.T. - Cheney, M. - Kuchment, P. (eds.): Tomography, Impedance Imaging, and Integral Geometry. Lecture Notes in Applied Mathematics*, Vol. **30**, AMS 1994.
61. Reconstruction of Process Tomography Images (Keynote Review), *in: Beck, M.S. et al. (eds.): Proceedings of ECAPT'94, March 24-26, Porto 1994*.
62. Sampling and resolution in CT, in: M.M. Lavrent'ev (ed.): *Computerized Tomography*, p. 343-354. VSP Utrecht, 1995.
63. Finite Difference Methods for Inverse Problems, *Proceedings of the Workshop on Inverse Problems, HoChiMinh City, January 17-19 (1995)*.

64. Accurate Attenuation Correction in Spect Without Transmission Measurements, (with A. Welch, R. Clack, G.T. Gullberg). *IEEE NSS-MIC Conference, San Francisco, Oct. 21-28 (1995)*.
65. (Zusammen mit F. Wübbeling) A Propagation-Backpropagation Method for Ultrasound Tomography, *Inverse Problems* **11**, 1225-1232 (1995).
66. Toward accurate attenuation correction in SPECT without transmission measurements (with A. Welch, R. Clack, G.T. Herman). *IEEE Trans. Med. Imag.* **16**, 532-540, (1997).
67. Algorithms in Tomography, *in: Duff, I.S. - Watson, G.A. (eds.): The State of the Art in Numerical Analysis*. Clarendon Press 1997.
68. An initial value approach for inverse Helmholtz problems, *in: Engl, H. W. et al. (eds.): Inverse Problems in Medical Imaging and Nondestructive Testing, p. 159-167*. Springer 1997.
69. An Algorithm for 3D Ultrasound Tomography, *in: Chavent, G. - Sabatier, P.C. (eds.): Inverse Problems of Wave Propagation and Diffraction*. Springer 1997.
70. Comparison of three applications of ConTraSPECT (zusammen mit Laurette, F., Clackdoyle, R., Welch, A. and Gullberg, G. T.), *IEEE NSS and MIC Conf. Record*. Toronto (1998)
71. Mathematical models in medical imaging, *Computational Radiology and Imaging. Therapy and Diagnostics. The IMA volumes in mathematics and its applications*, vol. **110**, Springer 1998.
72. Numerical Methods in Tomography. *Acta Numerica* 1999.
73. Stable marching for Helmholtz equations, *in: Bermudez, A. et al. (eds.): Mathematical and Numerical Aspects of Wave Propagation*, 939-941. SIAM 2000.
74. Algorithms in ultrasound tomography. *Contemporary Mathematics* **278**, 49-56 (2001).
75. Iterative solution of the inverse scattering problem at fixed frequency. *Kleinheubacher Berichte*, 2001.
76. An algorithm for the fully nonlinear inverse scattering problem at fixed frequency. *Journal of Computational Acoustics* **9**, 935-940 (2001).
77. Inversion of the attenuated Radon transform. *Inverse Problems* **17**, 113-119 (2001).
78. X-ray tomography, *in: Inverse Problems and Imaging, Lecture Notes in Mathematics* **1943**, Springer 2002.

79. Zusammen mit T. Dierkes, O. Dorn, V. Palamodov, H. Sielschott: Fréchet derivatives for some bilinear inverse problems, *SIAM J. on Appl. Math.* **62**, 2092-2113 (2002).
80. Zusammen mit Erik L. Ritman: Past and future directions in X-ray computed tomography, *International Journal of Imaging Systems & Technology* **12**, 175-187 (2002).
81. Zusammen mit M. Cheney and B. Borden: Resolution for radar and X-ray tomography, *Inverse Problems* **19** S 55 - S 66 (2003).
82. Error estimates for the Born approximation, *Inverse Problems* **20**, 447 - 452 (2004).
83. Image reconstruction in transmission ultrasound tomography, in: *W. Arnold and S. Hirsekorn (eds.): Acoustical Imaging* Kluwer Academic/Plenum Publishers, Dordrecht & New York 2004.
84. Marching schemes for inverse Helmholtz problems, *Proceedings of SCA03, Hongkong, January 6-9 (2003)*, in: *Advances in Scientific Computing and Applications*, pp. 321-330, Science Press, Beijing/New York (2004)
85. Inverting the attenuated vectorial Radon transform, *Journal of Inverse and Ill-Posed Problem* **13**, 93-101 (2005).
86. Zusammen mit Frank Wübbeling: Marching schemes for inverse acoustic scattering problems, *Numer. Math.* **100**, 697 - 710 (2005).
87. Zusammen mit Olga Klyubina: Initial value problems of Helmholtz and Maxwell equations, *J. of Comp. Math.* **25**, 368-373 (2007).
88. Imaging and inverse problems of partial differential equations, *Jahresber. Deutsch. Math.-Verein.* **109**, 31-48 (2007).
89. Ultrasound tomography with fixed linear arrays of transducers, in: *Y. Censor, M. Jiang, A.K. Louis (eds), Mathematical Methods in Biomedical Imaging and Intensity-Modulated Radiation Therapy (IMRT)*. CRMS Series Vol. 7, Scuola Normale Superiore Pisa 2008.
90. Acoustic imaging in 3D, in: *Y. Censor, M. Jiang, and G. Wang (eds): Biomedical Mathematics: Promising Directions in Imaging, Therapy Planning, and Inverse Problems*. Medical Physics Publishing 2009.
91. Reflectors in wave equation imaging, *Wave Motion* **45**, 776-784 (2008).
92. Incomplete data problems in wave equation imaging, *Inverse Problems and Imaging* **4**, 685-691 (2010).
93. Marcel Proust und die Mathematik, *Proustiana* **26**, 60-74 (2010).

94. Ultrasound mammography with a mirror, *Phys. Med. Biol.* **55**, N275-N279 (2010).
95. Reflection imaging without low frequencies, *Inverse Problems* **27**, 035011 (2011).
96. Bildgebung mit der Wellengleichung, *Rundbrief GAMM* **1**, 6-14 (2011).
97. Possibilities and limitations of time domain wave equation imaging, *Contemporary Mathematics* **559**, 151-162 (2011).
98. Photo-acoustic inversion in convex domains, *Inverse Problems and Imaging (IPI)* **6**, 315-320 (2012).
99. Fast Fourier methods for synthetic aperture radar imaging (together with F. Andersson and R. Moses), *IEEE Transactions on Aerospace and Electronic Systems* **48**, 215-229 (2012).
100. Reflection imaging of layered media without using low frequencies, *Inverse Problems* **29**, 035001 (2013).
101. Adjoint Methods as Applied to Inverse Problems. *In: Björn Engquist (ed.): Encyclopedia of Applied and Computational Mathematics*, 33-36 Springer 2015.
102. Sonic Imaging. *In: Otmar Scherzer (ed.): Handbook of Mathematical Methods in Imaging, Second Edition*, 1253-1278 Springer 2015.
103. Image reconstruction in quantitative susceptibility mapping. *SIAM J. Imaging Sci.* **9**, 1127-1132 (2016).

Technical Reports

1. Acceleration of convergence for finite element solutions of the Poisson equation on irregular meshes. (Zusammen mit A. Louis). *TR Fachbereich 10 der Universität des Saarlandes*.
2. On the smoothing property of the Bayes approach to picture reconstruction. *TR Fachbereich 10 der Universität des Saarlandes* (1978).
3. Numerical analysis of ill-posed problems. Fundacao Universidade de Brasilia, *Trabalho de Matemática No. 145* (1979).
4. Vorausberechnung des Grubenklimas in sonderbewetterten Betrieben. (Zusammen mit Quack, H. und Güsmann, B.). *Abschlußbericht über das Projekt Nr. 01 VB 285 - Z 13 TAP 0005 des BMFT*, Januar 1979.
5. An ultra-fast algorithm in tomography. (Zusammen mit K.H. Löw). *TR Fachbereich 10 der Universität des Saarlandes* (1981).
6. Discretization off ill-posed problems. Pubblicazioni dell'istituto di analisi globale e applicazioni, serie *Problemi non ben posti ed inversi*, **n. 9**, Firenze 1983.
7. Some ill-posed problems arising in connection with Radon's integral equation. Pubblicazioni dell'istituto di analisi globale e applicazioni, serie *Problemi non ben posti ed inversi*, **n. 8**, Firenze 1983.
8. Computable error bounds for linear systems via backward analysis. *Technical Report, Institut für Numerische und instrumentelle Mathematik, Münster 1985*.
9. Identifying a coefficient in a stationary Boltzman equation. Pubblicazioni dell'istituto di analisi globale e applicazioni, *Problemi non ben posti ed inversi*, **n. 38**. Firenze 1988.
10. A discrete Gelfand-Levitan theory, *Technical Report, Institut für Numerische und instrumentelle Mathematik, Universität Münster*.
11. Numerical Solution of Bilinear Inverse Problems, Technical Report **19/96-N**, Fachbereich Mathematik der Universität Münster.
12. Schallpyrometrie, in: *Mathematik Schlüsseltechnologie für die Zukunft. K. H. Hoffmann, W. Jäger, T. Lohmann und H. Schunk (eds.), pp. 435 - 446, Springer 1997 (zusammen mit H. Sielschott und W. Dericks)*.
13. Resolution and Reconstruction for a Helical CT-Scanner, Technical Report **20/96-N**, Fachbereich Mathematik der Universität Münster.

14. Zusammen mit V.P. Palamodov und N. Grinberg: Spatial resolution of the PBP algorithm in acoustical inverse scattering, *Technical Report, Institut für Numerische und instrumentelle Mathematik, Universität Münster.*
15. Numerical solution of inverse evolution problems via the nonlinear Levitan equation, *Technical Report, Institut für Numerische und instrumentelle Mathematik, Universität Münster.*
16. A constructive solution to the inverse scattering problem of the wave equation at one frequency and plane wave irradiation, *Technical Report, Institut für Numerische und instrumentelle Mathematik, Universität Münster.*
17. A simple method for finding the support of a scatterer, *Technical Report, 13/04-N Institut für Numerische und Angewandte Mathematik, Universität Münster.*
18. Range conditions in tomography, *Technical Report, Institut für Numerische und Angewandte Mathematik, Universität Münster.*
19. Scatter correction in PET based on transport models, *Technical Report 14/04-N, FB 10, Institut für Numerische und Angewandte Mathematik Universität Münster.*
20. Convergence of string averaging methods in imaging. *Technical Report, Institut für Mathematik und Informatik, Universität Münster 2016.*
