zum

Kolloquium des Mathematischen Instituts
(unterstützt durch GK Topologie und Metageometrie und
Leibniz-Preis)

am Donnerstag, 06.05.2010 um 16:30 Uhr, im Hörsaal M5, spricht

Professor Dr. Valentin Blomer

(Universität Göttingen)

über das Thema:

„On the Ramanujan Conjecture “

Abstract:

The Ramanujan conjecture, originally posed by Ramanujan in 1919 as a bound for the Fourier coefficients of a certain modular function, has vastly been generalized in the setting of representation theory and is one of the fundamental unproven conjectures in the theory of automorphic forms. I will discuss several methods to attack it, and will present new techniques that yield particular strong results over general number fields (joint work with Farrell Brumley).

Tee wird ab 16 Uhr im SR0 des Mathematischen Instituts serviert.
