Geometry, HOlonomy and Structures with Torsion (GHOST)

23 – 27 March 2026 | University of Münster, Germany

The goal of this workshop is to bring together young European-based researchers under the broad umbrella of geometric structures. We aim to provide a place for interaction and sharing of research ideas across a range of disciplines: these include Spin geometry, special holonomy, almost Hermitian geometry, hypercomplex geometry, or Kähler and complex algebraic geometry and related topics.
