Masterseminar

Partial Differential Equations. Theory and Mathematical Modelling

Prof. Angela Stevens
Summer term 2024
Tue 14:00-16:00

PDE-theory and applications comprise a large field of mathematical research with strong connections to many
other mathematical topics, other sciences and applications, as there are e.g. engineering, physics, biology, medicine, and financial markets.
In this context, we will discuss actual research articles, which will be chosen according to the mathematical and
scientific preferences of the students.

The seminar can prepare for a Master thesis in this area.
