

Masterseminar

Current Research in PDE and Applications

Prof. Angela Stevens
WS 23/24
Dienstag 14:00-16:00

PDE-theory and applications comprise a large field of mathematical research with strong connections to many other mathematical topics, other sciences and applications, as there are e.g. engineering, physics, biology, medicine, and financial markets.

In this context, we will discuss actual research articles, which will be chosen according to the mathematical and scientific preferences of the students.

The seminar can prepare for a Master thesis in this area.
