

Public lecture series of the Münster Graduate School of Evolution

> The Growth of the Evolutionary Thought

Winter semester 2020/21 | Mondays 17.00 – 18.15

November 2 **Cameron K. Ghalambor**
Norwegian University of Science and Technology
Incorporating the role of phenotypic plasticity into studies of adaptive evolution

November 9 **Alessandro Minelli**
Università degli Studi di Padova
Exploring the Maze of Living Forms

November 16 **Frédéric Thomas**
Centre de Recherches Écol. & Évol. sur le Cancer
Evolution and Cancer

November 23 **Jill Hamilton**
North Dakota State University
Adaptive evolution in a changing climate: challenges and opportunities for restoration and conservation

November 30 **Tracey Chapman**
University of East Anglia
The role of sexual conflict in driving evolutionary change

December 7 **Irja Ida Ratikainen**
Norwegian University of Science and Technology
The effect of environmental stochasticity on the outcome of evolution

December 14 **Élio Sucena**
Instituto Gulbenkian Ciência
Using evolution to learn about ultimate and proximate mechanisms of *Drosophila* immunity

January 11 **Niels Dingemanse**
Ludwig-Maximilians-Universität München
Adaptive Animal Personality Variation? Evidence from field studies of natural and sexual selection

January 18 **Robert Paxton**
Martin-Luther-Universität Halle-Wittenberg
Viral quasi species - a slap in the face of Darwinism

January 25 **Melanie Dammhahn**
Universität Potsdam
Ecological consequences of individual differences in behaviour

February 1 **Iain Couzin**
Max-Planck-Institute of Animal Behavior
Universität Konstanz
The Evolution of Collective Intelligence

Zoom link available upon request to Francesco Catania
