## The European Particle Physics Strategy, Future Circular Collider and CERN

This year and the next few will be crucial for the future of CERN and particle physics in Europe. This future is being shaped through the European Strategy for Particle Physics (ESPP) update, which is currently ongoing. A key input is the recently released feasibility study for the possible Future Circular Collider (FCC) at CERN. In this talk I will review the governance of CERN, the ESPP process and its status, the finding of the feasibility study, and what physics could be done such a collider.
