

Call for Papers

What new insights can be obtained through models? Or do they represent such an abstraction of reality that they become devoid of meaning?

What are the limitations of archaeological data used for modelling?
Where does their reliability end?

We invite interested colleagues to explore with us the various forms of models and modelling in archaeology by presenting their own examples and to discuss their benefits and pitfalls.

Papers may contribute to one of the following categories:

- Theoretical models (e.g. models of social or political development, conceptual models)
- Explicit models/Digital modelling (e.g. predictive modelling, network modelling, simulations, ABM, quantitative models)

Deadlines: 15. September 2026 – 15. January 2027

Please, send your abstract as a pdf file (no more than 400 words) to :
model27@uni-muenster.de
