Probabilistic Temporal Relational and Lifted Models

Murphy (2002), Poole (2003), Ahmadi et al. (2013)

Parfactor graph G: Compact encoding of full joint d. $P_G = \frac{1}{Z} \prod_{f \in gr(u(G))} f$

Marginal distribution query: $P(A_{\pi}^{i}|E_{0:t})$ w.r.t. the model:

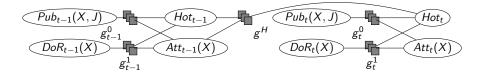

- Prediction: $\pi > t$ (is the topic hot in πt days?)
- Filtering: $\pi = t$ (is the topic hot today?)
- Hindsight: $\pi < t$ (was the topic hot $t \pi$ days ago?)
