

Nanocrystallisation and shear bands in amorphous metals

von

Joachim Bokeloh

Diplomarbeit in Physik

angefertigt im

Institut für Materialphysik

vorgelegt der

Mathematisch-Naturwissenschaftlichen Fakultät

der

Westfälischen Wilhelms-Universität

Münster

im November 2008

Referent: Prof. Dr. G. Wilde

Korreferent: Prof. Dr. N. A. Stolwijk

Contents

1	Introduction	1
2	Metallic glasses	3
2.1	Glass formation	3
2.2	The glassy state	6
2.3	Shear bands	9
2.4	Nanocrystallisation	12
3	Experimental proceedings	17
3.1	Sample production	17
3.2	Sample characterisation	20
3.2.1	Sample composition	20
3.2.2	Structural analysis	20
3.2.3	Thermal analysis	22
3.2.4	Diffusion measurements	28
4	Thermal behaviour of $\text{Al}_{88}\text{Y}_7\text{Fe}_5$	31
4.1	Results	31
4.1.1	Crystallisation sequence	31
4.1.2	Glass transition using Modulated DSC	32
4.1.3	Glass transition using conventional DSC	32
4.1.4	Relaxation and crystallisation using TAM	39
4.1.5	Primary crystallisation in XRD and TEM	46
4.1.6	Influence of annealing treatments on the glass transition using MDSC	51
4.2	Conclusions	54
4.2.1	Glass transition of $\text{Al}_{88}\text{Y}_7\text{Fe}_5$	54
4.2.2	Initial stage of primary crystallisation	55
5	Diffusion in shear bands	57
5.1	Results	57
5.1.1	Deformation of $\text{Pd}_{40}\text{Ni}_{40}\text{P}_{20}$	57
5.1.2	Diffusion measurements	60
5.2	Conclusions	64
6	Summary and outlook	65
A	Thermal behaviour of $\text{Al}_{88}\text{Y}_7\text{Fe}_5$	69

A.1 Microcalorimetry	69
B Diffusion in shear bands	71
