

Westfälische Wilhelms-Universität Münster

# Excess heat capacity contributions of marginally glass forming metallic alloys

Institute of Materials Physics

Group Wilde

Master thesis

Marius Gerlitz

Münster 2018

1<sup>st</sup> Supervisor: Prof. Dr. Gerhard Wilde

2<sup>nd</sup> Supervisor: Dr. Martin Peterlechner

# Contents

1	Introduction .....	1
2	Fundamentals.....	2
2.1	Metallic Glasses.....	2
2.2	The glass transition.....	7
2.3	The relaxation .....	9
2.4	Deformation in metallic glasses .....	10
2.5	The boson peak.....	11
3	Experimental methods .....	15
3.1	Melt spinning .....	15
3.2	X-ray diffraction .....	17
3.3	Differential scanning calorimetry .....	19
3.4	Transmission electron microscopy .....	22
3.5	Scanning electron microscope .....	24
3.6	Physical property measurement system.....	26
4	Experimental proceedings .....	29
4.1	Sample production.....	29
4.2	Melt spinning.....	31
4.3	Characterization of the metallic glass ribbon .....	32
4.3.1	X-ray diffraction of the amorphous ribbon.....	33
4.3.2	Calorimetric analysis of the amorphous ribbon.....	34
4.3.3	TEM analysis of the amorphous ribbon.....	36
4.4	PPMS measurements .....	39
4.4.1	PPMS measurements of the as cast ribbon .....	39
4.4.2	PPMS measurements of the deformed ribbon .....	42
4.4.3	Alternative method for PPMS measurements.....	46
4.5	Analysis of the HPT deformed material .....	50
4.5.1	DSC of the HPT deformed ribbon.....	50
4.5.2	XRD of the HPT deformed ribbon.....	52
4.5.3	TEM of the HPT deformed ribbon .....	54
5	Discussion and Outlook.....	56
6	Appendix .....	59
A.	DSC of the as cast ribbon.....	59

B. PPMS measurements .....	61
C. Python script code.....	63
7 Literaturverzeichnis .....	76
