

Papers in Scientific Journals and Books:

1978 - 1985

NEUGEBAUER, H.J. and T. SPOHN 1978. Late stage development of mature Atlantic-type continental margins. *Tectonophysics*, 50, 275-305.

SPOHN, T. and H.J. NEUGEBAUER 1978a. On the mechanism of subsidence of sedimentary basins adjacent to passive continental margins. In *Alps, Apennines, Hellenides* (H. Closs, D. Roeder, and K. Schmidt, Eds.), p. 13-16. Schweitzerbart'sche Verlagsbuchhandlung, Stuttgart.

SPOHN, T. and H.J. NEUGEBAUER 1978b. Metastable phase transition models and their bearing on the development of Atlantic-type geosynclines. *Tectonophysics*, 50, 387-412.

SPOHN, T. 1980. Orogenic volcanism caused by thermal runaway? *Geophys. J. R. Astr. Soc.*, 62, 403-419.

NEUGEBAUER, H.J. and T. SPOHN 1981. Metastable phase transitions and progressive decline of gravitational energy: Aspects of Atlantic-type continental margin dynamics. *AGU-Geodyn. Ser.*, 6, 166-183.

SCHUBERT, G. and T. SPOHN 1981. Two-layer mantle convection and the depletion of radioactive elements in the lower mantle. *Geophys. Res. Lett.*, 9, 951-954.

SPOHN, T. 1981. On the origin of orogenic volcanism. *Geol. Rundsch.*, 70, 154-165.

SPOHN, T. and G. SCHUBERT 1982a. Convective thinning of the lithosphere: A mechanism for continental rifting. *J. Geophys. Res.*, 87, 4669-4681.

SPOHN, T. and G. SCHUBERT 1982b. Modes of mantle convection and the removal of heat from the Earth interior. *J. Geophys. Res.*, 87, 4682-4686.

WOLF, D. 1982a. Comment on 'Geomagnetic depth sounding by induction arrow representation: a review' by G.P. Gregori and L.P. Lanzerotti. *Rev. Geophys. Space Phys.*, 20, 519-521.

WOLF, D. 1982b. Inductive coupling between idealized conductors and its significance for the geomagnetic coast effect. Master of Science Thesis, University of Toronto, Toronto, Ontario.

SPOHN, T. and G. SCHUBERT 1983. Convective thinning of the lithosphere: A mechanism for continental rifting and mid-plate volcanism on Earth, Venus, and Mars. *Tectonophysics*, 94, 67-90.

STEVENSON, D.J., T. SPOHN, and G. SCHUBERT 1983. Magnetism and thermal evolution of the terrestrial planets. *Icarus*, 54, 466-489.

WOLF, D. 1983a. Inductive coupling between idealized conductors and its significance for the geomagnetic coast effect. *J. Geophys.*, 52, 22-33.

WOLF, D. 1983b. Singular solutions to Maxwell's equations and their significance for geomagnetic induction. *Geophys. J. R. Astron. Soc.*, 75, 279- 283.

SPOHN, T. 1984. Die thermische Evolution der Erde. *J. Geophys.*, 54, 77-96.

WOLF, D. 1984a. Isostatic compensation and continental lithospheric thickness. *J. Geophys.*, 54, 110-113.

WOLF, D. 1984b. On the relation between two-dimensional and axisymmetric loads in plate flexure problems. *J. Geophys.*, 54, 232-235.

WOLF, D. 1984c. The relaxation of spherical and flat Maxwell Earth models and effects due to the presence of the lithosphere. *J. Geophys.*, 56, 24- 33.

WOLF, D. 1985a. Thick-plate flexure re-examined. *Geophys. J. R. Astron. Soc.*, 80, 265-273.

WOLF, D. 1985b. On Boussinesq's problem for Maxwell continua subject to an external gravity field. *Geophys. J. R. Astron. Soc.*, 80, 275-279.

WOLF, D. 1985c. The normal modes of a uniform, compressible Maxwell half-space. *J. Geophys.*, 56, 100-105.

WOLF, D. 1985d. An improved estimate of lithospheric thickness based on a reinterpretation of tilt data from Pleistocene Lake Algonquin. *Can. J. Earth Sci.*, 22, 768-773.

WOLF, D. 1985e. Dynamics of the continental lithosphere. Doctor of Philosophy Thesis, University of Toronto, Toronto, Ontario.

WOLF, D. 1985f. The normal modes of a layered, incompressible Maxwell half-space. *J. Geophys.*, 57, 106-117.

1986 - 1990

AVERMANN, M.E. and V. MÜLLER-MOHR 1986. Contact Metamorphism of the Footwall Rocks and Sudbury Breccias in Levack and Cartier Townships, District of Sudbury. In Summary of Field Work and Other Activities 1986, by the Ontario Geological Survey, edited by P.C. Thurston, Owen L. White, R.B. Barlow, M.E. Cherry, and A.C. Colvine. Ontario Geological Survey, Miscellaneous Paper, 132, 125-126.

SCHUBERT, G., T. SPOHN, and R.T. REYNOLDS 1986. Thermal histories, compositions, and internal structures of the moons of the solar system. In *Satellites* (J. A. Burns and M. Matthews, Eds.), p. 224-292. Univ. of Arizona Press, Tucson.

WOLF, D. 1986a. On deglaciation-induced perturbations of the geoid. *Can. J. Earth Sci.*, 23, 269-272.

WOLF, D. 1986b. Glacio-isostatic adjustment in Fennoscandia revisited. *J. Geophys.*, 59, 42-48.

WOLF, D. 1986c. Reply to comments by Robert P. Comer. *Geophys. J. R. Astron. Soc.*, 85, 469-470.

WOLF, D. 1986d. A method of calculating lithosphere thickness from observations of deglacial land uplift and tilt. *J. Geophys.*, 60, 28-32.

WOLF, D. 1987. An upper bound on lithosphere thickness from glacio-isostatic adjustment in Fennoscandia. *J. Geophys.*, 61, 141-149.

AVERMANN, M.E. and V. MÜLLER-MOHR 1988. Breccias of the Sudbury Structure, District of Sudbury. In *Summary of Field Work and Other Activities 1988*, by the Ontario Geological Survey, edited by A.C. Colvine, M.E. Cherry, Burkhard O. Dressler, P.C. Thurston, C.L. Baker, R.B. Barlow, and Chris Riddle. Ontario Geological Survey, Miscellaneous Paper , 141, 297-299.

SEGATZ, M., T. SPOHN, M.N. ROSS, and G. SCHUBERT 1988. Tidal dissipation, surface heat flow, and figure of visco-elastic models of Io. *Icarus*, 75, 187-206.

SCHUBERT, G., M.N. ROSS, D.J. STEVENSON, and T. SPOHN 1988. Mercury's thermal history and the generation of its magnetic field. In *Mercury* (F. Vilas, C.R. Chapman und M.S. Matthews,Eds.), p. 429-460. Univ. of Arizona Press, Tucson.

SPOHN, T., M. HORT, and H. FISCHER 1988. Numerical simulation of the crystallization of multicomponent melts in thin dikes or sills: 1. The liquidus phase. *J. Geophys. Res.*, 93, 4880-4894.

AVERMANN, M.E. and V. MÜLLER-MOHR 1989. Breccias of the Sudbury Structure. In *Summary of Field Work and Other Activities 1989*, by the Ontario Geological Survey, edited by A.C. Colvine, M.E. Cherry, Burkhard O. Dressler, Owen L. White, R.B. Barlow, and Chris Riddle. Ontario Geological Survey, Miscellaneous Paper, 146, 116-119.

GRÜN, E., H. FECHTIG, H. KOHL, J. KLINGER, H. KOCHAN, W. SEBOLDT, K. THIEL, T. SPOHN, and J. BENKHOFF 1989. Mechanisms of dust emission from the surface of a cometary nucleus. *Adv. Space Res.*, 9, 133-137.

KLINGER, J., J. BENKHOFF, S. ESPINASSE, E. GRÜN, W. IP, F. JOÓ H.U. KELLER, H. KOCHAN, H. KOHL, K. ROESSLER, W. SEBOLDT, T. SPOHN, and K. THIEL 1989. How far do results of recent simulation experiments fit current models of cometary nuclei? In *Proc. 19th Lunar and Planet. Sci. Conf.* (G. Ryder and V.L. Sharpton, Ed.), pp. 493-497. Cambridge Univ. Press, Cambridge.

KOCHAN, H., B. FEUERBACHER, F. JOÓ, J. KLINGER, W. SEBOLDT, A. BISCHOFF, H. DÜREN, D. STÖFFLER, T. SPOHN, H. FECHTIG, E. GRÜN, H. KOHL, D. KRANKOWSKY , K. ROESSLER, K. THIEL, G. SCHWEHM, and U.

WEISHAUPT 1989. Comet simulation experiments in the DFVLR space simulators. *Adv. Space Res.*, 9, 113-122.

SPOHN, T., J. BENKHOFF, J. KLINGER, E. GRÜN, and H. KOCHAN 1989. Thermal modelling of two KOSI comet nucleus simulation experiments. *Adv. Space Res.*, 9, 127-131.

SPOHN, T., K. SEIFERLIN, and J. BENKHOFF 1989. Thermal conductivities and diffusivities of porous ice samples at low pressures and temperatures and possible modes of heat transfer in near surface layers of comets. *Proc. of an International Workshop on Physics and Mechanics of Cometary Material*, ESA SP-302, 77-81.

STEINBACH, V., U. HANSEN, and A. EBEL 1989. Compressible convection in the Earth's mantle: A comparison of different approaches. *Geophys. Res. Lett.*, 16, 633-635.

STÖFFLER, D., M. AVERMANN, L. BISCHOFF, P. BROCKMEYER, A. DEUTSCH, B.O. DRESSLER, R. LAKOMY, and V. MÜLLER-MOHR 1989. Sudbury, Canada: Remnant of the only multi-ring (?) impact basin on Earth. *Meteoritics*, 24, 328.

FISCHER, H.J. and T. SPOHN 1990. Thermal-orbital histories of visco-elastic models of Io (J1). *Icarus*, 83, 39-65.

ROSS, M.N., G. SCHUBERT, T. SPOHN, and R.W. GASKELL 1990. Internal Structure of Io and the global distribution of its topography. *Icarus*, 85, 309-325.

SCHUBERT, G. and T. SPOHN 1990. Thermal history of Mars and the sulfur content of its core. *J. Geophys. Res.*, 95, 14095-14104.

SPOHN, T. and J. BENKHOFF 1990. Thermal history models for KOSI sublimation experiments. *Icarus*, 87, 358-371.

SPOHN, T. 1990. Triton. *Bild der Wissenschaft*, 12/90, 110-114.

WOLF, D. 1990. The viscoelastic Boussinesq's problem. *Rep. Inst. Geophys. Dep. Geod. Univ. Uppsala*, 31, 1-20.

1991-1995

BENKHOFF, J. and T. SPOHN 1991a. Thermal histories of the KOSI samples. *Geophys. Res. Lett.*, 18, 261-264.

BENKHOFF, J. and T. SPOHN 1991b. Results of a coupled heat and mass transfer model applied to KOSI sublimation experiments. In *Theoretical Modelling of Comet Simulation Experiments*. (N. I. Kömle, S. J. Bauer, and T. Spohn, Eds.), p. 31-47. Verlag der Österreichischen Akademie der Wissenschaften, Wien.

GRÜN, E., A. BAR-NUN, J. BENKHOFF, A. BISCHOFF, H. DÜREN, H. HELLMANN, P. HESSELBARTH, P. HSIUNG, H. U. KELLER, J. KLINGER, J. KNÖLKER, H. KOCHAN, H. KOHL, G. KÖLZER, D. KRANKOWSKI, P. LÄMMERZAHN, K. MAUERSBERGER, G. NEUKUM, A. OEHLER, L. RATKE, K. ROESSLER, G.

SCHWEHM, T. SPOHN, D. STÖFFLER, and K. THIEL 1991. Laboratory simulation of cometary processes: Results from first KOSI experiments. In *Comets in the Post-Halley Era*. (R. L. Newburn, Jr., M. Neugebauer, and J. Rahe, Eds.), p. 277-297. Kluwer Academic Publishers, Dordrecht.

HORT, M. and T. SPOHN 1991a. Numerical simulation of the crystallization of multicomponent melts in thin dikes or sills: 2. Effects of heterocatalytic nucleation and composition. *J. Geophys. Res.*, 96, 485-499.

HORT, M. and T. SPOHN 1991b. Crystallization of a binary melt cooling at constant rates of heat removal. *Earth Planet. Sci. Lett.*, 107, 463-474.

KÖMLE, N. I., S. J. BAUER, and T. SPOHN 1991. *Theoretical Modelling of Comet Simulation Experiments*. Verlag der Österreichischen Akademie der Wissenschaften, Wien, 101pp.

YINTING LI and T. SPOHN 1991. Melt extraction from a partially molten cylindrical mantle plume. *Geophys. J. Int.*, 107, 103-116.

SEIFERLIN, K. 1991. The thermal conductivity of porous ice with application to KOSI sample material: A review, in: *Theoretical Modelling of Comet Simulation Experiments*, Editors N.I. Kömle, S.J. Bauer, and T. Spohn, Verlag der Österreichischen Akademie der Wissenschaften, 49-66

SPOHN, T. 1991. Mantle differentiation and thermal evolution of Mars, Mercury, and Venus. *Icarus*, 90, 222-236.

SPOHN, T. and G. SCHUBERT 1991. Thermal equilibration of the Earth following a giant impact. *Geophys. J. Int.*, 107, 163-170.

WOLF, D. 1991a. Viscoelastodynamics of a stratified, compressible planet: incremental field equations and short- and long-time asymptotes. *Geophys. J. Int.*, 104, 401-417.

WOLF, D. 1991b. Glacial isostasy and long-term crustal movements in Fennoscandia with respect to lithospheric and asthenospheric processes and properties: comment. *Tectonophysics*, 195, 445-446.

WOLF, D. 1991c. Boussinesq's problem of viscoelasticity. *Terra Nova*, 3, 401-407.

AVERMANN, M. and P. BROCKMEYER 1992. The Onaping Formation of the Sudbury Structure, (Canada): An example of allochthonous impact breccias. *Tectonophysics*, 216, 227-234.

BALSIGER, H., J. BECKERS, A. CARUSI, J. GEISS, G. GRIEGER, G. HORNECK, P. HOYNG, M. JACOB, Y. LANGEVIN, J. LEMAIRE, J. LEQUEUX, P. PINET, T. SPOHN, and H. WÄNKE 1992. *Mission to the Moon.*, ESA Pub. SP-1150. European Space Agency 190pp.

STEINBACH, V. and D.A. YUEN 1992. The effects of multiple phase transitions on Venusian mantle convection. *Geophys. Res. Lett.*, 19, 2243-2246.

BREUER, D. and T. SPOHN 1993. Cooling of the Earth, Urey ratios, and the problem of potassium in the core. *Geophys. Res. Lett.*, 20, 1655-1658.

BREUER, D., T. SPOHN, and U. WÜLLNER 1993. Mantle differentiation and the crustal dichotomy of Mars. *Planet. Space Sci.*, 41, 269-283.

CHICARRO, A. F., M. CORRADINI, M. FULCHIGNONI, K. HILLER, J. M. KNUDSEN, I. LIEDE, C. LINDBERG, P. LOGNONNÉ, R. PELLINEN, T. SPOHN, F. TAYLOR, G. E. N. SCOON, and H. WÄNKE 1993. Marsnet: Report on the phase-A study. ESA Pub. SCI (93)2. European Space Agency 120pp.

HORT, M., B. D. MARSH, and T. SPOHN 1993. Igneous layering through oscillatory nucleation and crystal settling in well-mixed magmas. *Contrib. Min. Petrol.*, 114, 425-440.

SOHL, F. 1993a. Der Jupitermond Io, Teil 1. *Sterne und Weltraum*, 32, 778-783.

SOHL, F. 1993b. Der Jupitermond Io, Teil 2. *Sterne und Weltraum*, 32, 846-853.

SPOHN, T. and D. BREUER 1993. Mantle differentiation through crust growth and renewal and the thermal evolution of the Earth. In *Evolution of the Earth and Planets* (E. Takahashi, R. Jeanloz, and D. C. Rubie., Eds.), IUGG vol. 14, *Geophys. Monogr. Ser.* 74 p. 55-71, Am. Geophys. U..

STEINBACH, V., D.A. YUEN, and W. ZHAO 1993. Instabilities from phase transitions and the timescales of mantle thermal evolution. *Geophys. Res. Lett.*, 20, 1119-1122.

WOLF, D. 1993a. The changing role of the lithosphere in models of glacial isostasy: a historical review. *Global Planet. Change*, 8, 95-106.

WOLF, D. 1993b. Gravitational viscoelastodynamics for a hydrostatic planet. Habilitation Thesis, Westfälische Wilhelms-Universität, Münster, Germany.

AMELUNG, F. and D. WOLF 1994. Viscoelastic perturbations of the earth: significance of the incremental gravitational force in models of glacial isostasy. *Geophys. J. Int.*, 117, 864-879.

AVERMANN, M. 1994. Origin of the polymict, allochthonous breccias of the Onaping Formation, Sudbury Structure, Ontario, Canada. In: B.O. Dressler, R.A.F. Grieve, and V.L. Sharpton (eds), *Large Meteorite Impacts and Planetary Evolution*: Boulder, Colorado, Geological Society of America Special Paper, 293, 265-274.

CADEK, O., D.A. YUEN, V. STEINBACH, A. CHOPELAS, and C. MATYSKA 1994. Lower mantle thermal structure deduced from seismic tomography, mineral physics, and numerical modelling. *Earth Planet. Sci. Lett.*, 121, 385-402.

LOGNONNE, P., D. GIARDINI, R. SNIEDER, T. SPOHN, J. WOODHOUSE, and E. WIELANDT 1994. Very Broad Band Seismometers on the Surface Landers, In *Mars Surveyor Science Objectives and Measurements Requirements Workshop*, (D.J. Mc Cleese at al. eds), pp 105-106, JPL Tech. Rpt D12017, JPL, California Institut of Technology, Pasadena, CA.

SEIFERLIN, K. 1994. Rosetta - Spionin im All, Bild der Wissenschaft, 5/1994, 90-91.

SPOHN, T. and M. AVERMANN 1994. Venus. Physik in unserer Zeit, 9, 216-223.

STEINBACH, V. and D.A. YUEN 1994a. Melting instabilities in the transition zone. Earth Planet. Sci. Lett., 127, 67-75.

STEINBACH, V. and D.A. YUEN 1994b. Effects of depth-dependent properties on the thermal anomalies produced in flush instabilities from phase transitions. Phys. Earth Planet. Inter., 86, 165-183.

STÖFFLER, D., A. DEUTSCH, M. AVERMANN, L. BISCHOFF, P. BROCKMEYER, D. BUHL, R. LAKOMY, and V. MÜLLER-MOHR 1994 The formation of the Sudbury Structure, Canada: Toward a unified impact model. In: B.O. Dressler, R.A.F. Grieve, and V.L. Sharpton, (eds), Large Meteorite Impacts and Planetary Evolution: Boulder, Colorado, Geological Society of America Special Paper, 293, 303-318.

WOLF, D. 1994. Lamé's problem of gravitational viscoelasticity: the isochemical, incompressible planet. Geophys. J. Int., 116, 321-348.

YUEN, D.A., D.M. REUTELER, S. BALACHANDAR, V. STEINBACH, A.V. MALEVSKY, and J.L. SMEDSMO 1994. Various influences on three-dimensional mantle convection with phase transitions. Phys. Earth Planet Inter., 86, 185-203.

AVERMANN, M. 1995. Untersuchungen an Impaktbreccien der Sudbury-Struktur, Ontario, Kanada, und ihre Bedeutung für die Genese der Struktur. Münster. Forsch. Geol. Paläont., 77, 27-41.

BENKHOFF, J., K. J. SEIDENSTICKER, K. SEIFERLIN, and T. SPOHN 1995. Energy balance of a porous water ice sample under space simulated conditions: Results from the KOSI-8 experiment. Planet. Space Sci., 43, 353-361.

Elsevier Publication.

Dissertations

1988 - 2003

SEGATZ, M. 1988. Gezeitenerwärmung und Wärmetransport im Jupitermond Io.

FISCHER, H. J. 1989. Thermische und dynamische Evolution des Jupitermonds Io (J1) in der Laplace-Resonanz.

HORT, M. 1991. Thermokinetische Modellrechnungen zur Kristallisation magmatischer Schmelzen.

AVERMANN, M. 1992. Die Genese der allochthonen, polymikten Breccien der Onaping-Formation, Sudbury-Struktur, Ontario, Kanada.

BENKHOFF, J. 1992. Laborexperimente und Modellrechnungen zur Untersuchung der thermischen Evolution poröser Eis-Staub-Proben unter Weltraumbedingungen: Konsequenzen für Kometen und andere planetare Eiskörper.

THEISSING, J. 1993. Massen- und Wärmefluss durch Magmons unter Berücksichtigung von Schmelzprozessen.

BREUER, D. 1994. Krustenbildung und thermo-chemische Entwicklung terrestrischer Planeten: Erde und Mars im Vergleich.

KAUFMANN, G. 1995. Zur Auflösbarkeit lateraler Heterogenitäten im Erdmantel durch nacheiszeitliche Landhebungen am Beispiel der nördlichen Barentssee.

SEIFERLIN, K. 1995. Die Wärmeleitfähigkeit von porösem Eis und von Mineralstaubschüttungen: Bedeutung für Kometensimulations-Experimente und für die thermische Entwicklung von Kometen.

WÜLLNER, U. 1996. Konvektion unter lateralen, oberflächennahen Temperaturanomalien: Bedeutung für die Entstehung der Oberflächenheterogenitäten auf Mars und Mond.

KONRAD, W. 1997. Thermische Evolution des Mondes im Hinblick auf Marebasaltbildung und frühes Magnetfeld.

WIENBRUCH, U. 1997. Die Bedeutung der Gezeitendissipation für die gekoppelte thermisch-orbitale Evolution des Neptuntrabanten Triton, des Binärsystems Pluto-Charon und des Jupitersatelliten Io.

HAGERMANN, A. 1999. Auswertung planetarer Wärmeflußmessungen: Eine neue Inversionsmethode für Temperaturgradientenverfahren, vorgestellt am Beispiel des Experiments MUPUS PEN-TP.

WIECZERKOWSKI, K. 1999. Gravito-Viskoelastodynamik für verallgemeinerte Rheologien mit Anwendungen auf den Jupitermond Io und die Erde.

CONZELMANN, V. 1999. Thermische Evolution des Planeten Merkur berechnet unter Anwendung verschiedener Viskositätsgesetze.

NAGEL, K. 2001. Thermal-Compositional Convection and the Differentiation Process in Callisto.

HUSSMANN, H. 2002. Europa's Ocean and the Orbital Evolution of the Galilean Satellites.

ZIETHE, R. 2003. Sinking Iron Diapirs: A Model for Planetary Core Formation.

Diploma Theses

1987 - 1999

BENKHOFF, J. 1987. Modellrechnungen zur thermischen und chemischen Konvektion in magmatischen Intrusionen.

HORT, M. 1987. Kinetische Modelle zur Kristallisation in magmatischen Gängen.

AVERMANN, M. 1988. Geologische Kartierung in SW-Levack Township, Sudbury-Distrikt (Ontario, Kanada) und die Untersuchung der kontaktmetamorphen Überprägung der Grundgebirgsgesteine durch den Sudbury Igneous Complex in SW- und Zentral-Levack Township.

BREUER, D. 1990. Interpretation der holozänen Landhebung Svalbards: Hinweise auf laterale Inhomogenitäten rheologischer Parameter im oberen Erdmantel.

RÜMPKER, G. 1990. Viskoelastische Perturbationen eines Burgers-Halbraumes: Theorie und Anwendung.

SEIFERLIN, K. 1990. Die Wärmeleitfähigkeit synthetischer poröser Eisproben - Messungen und einfache Modelle.

TABBERT, A. 1990. Einflüsse thermisch isolierender Schichten auf darunterliegende Konvektionsrollen.

WIENBRUCH, C. 1990. Untersuchungen zur Kristallisationskinetik von Mischkristallen in magmatischen Gängen.

WIENBRUCH, U. 1990. Untersuchungen zur Evolution des Kerns und des Magnetfelds des Jupitermondes Io in der Laplacersonanz.

WÜLLNER, U. 1990. Einfluß einer Dehydrationsreaktion auf die Ausdünnung der Lithosphäre.

SCHOLZ, J. 1992. Modellierung der Hydrosphärenentstehung auf der Erde mit einem thermischen Evolutionsmodell.

BUSSMANN, G. 1993. Zeitliche Variation des Freibords, Entwicklung der Erdkruste und thermische Evolution der Erde.

CONZELMANN, V. 1994. Die thermische Evolution des Mondes und sein Magnetfeld.

HEISING, H. 1994. Deformation einer dünnen elastischen Platte: Theorie und Anwendung.

KEHSE, U. 1994. Modellrechnungen zur thermischen Evolution von Kometen.

LEWELING, M. 1994. Modellrechnungen zur remanenten Magnetisierung des Mars.

SCHÄFER, M. 1994. Maxwell- und Burgersrheologie für ein sphärisches Erdmodell unter besonderer Berücksichtigung der Horizontalverschiebung.

HAGERMANN, A. 1996. Messung des Temperaturprofils unter der Oberfläche eines Kometenkerns - Modellrechnungen zum Experiment PEN-TP des MUPUS-Paketes.

THOMA, M. 1997. Bestimmung der Mantelviskosität aus Beobachtungen der Landhebung und Berechnung von Schwereanomalien in Fennoskandien.

CAPPENBERG, G. 1998. Ein thermisches Evolutionsmodell mit parametrisierter von innen beheizter Konvektion am Beispiel des Mondes.

LANGE, P. 1999. Thermische Evolutionsrechnungen für den Mars mit Hilfe neuer Parametrisierungen des Wärmetransports.

ZIETHE, R. 1999. Dreidimensionale Konvektion im Mond und deren Einfluss auf Topographie und Geoid.
