

Thematic Search at the Shelf in the Library of Sports and Exercise Sciences

You have already found a book on your topic in the catalogue and are looking for further relevant literature?

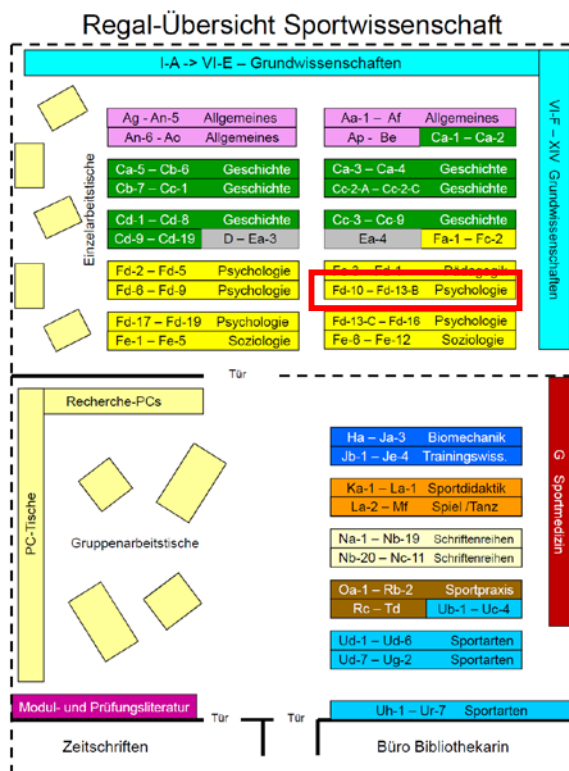

If the collection in your library is arranged thematically, it might be worthwhile to take a look at the classification system. You will find this, for example, in the Library of Sports and Exercise Sciences as a poster in the entrance area or in the large group study room.

Example: The result of your research is the following book, whose topic interests you:

Goldstein, J. (Hrsg.). (1983). *Sports violence*. New York: Springer.

Under the tab „Exemplare“ („copies“) you can find the following information:

Signatur (shelfmark): Fd-12-B 10 - Zweigstelle: Sportwissenschaft / Bibliothek (Branch: Sports and Exercise Sciences / Library)

According to the classification you will find the area **Fd – Psychologie** in the quiet study room in the library.

- Fd – Psychology/ Sports Psychology
 - 12 – Personality and Differential Psychology in Sports
 - A – Sports & Aggression
 - 10 – continuous count on the shelf
(Lower case letters after the count indicate multiple copies and, where applicable, more recent editions)

Thematic Search Using the Classification Number in the Online Catalogue

In addition, you can also search thematically by selecting the corresponding section from the

classification of the Library of Sports and Exercise Sciences (-> see the register Shelfmarks/Classification) or from the online classification systems of the Reading Room and the Textbook Collection in the ULB and then transferring them to the search field "Signatur" ("shelfmark") in the ULB catalogue. To do this, add an asterisk to the classification number.

Relating to the example above, it would be Fd-12-B* for literature on "Sports & Aggression".
